Alerting Abstract DE U1

NOVELTY - The yarns have large surface areas and the suction surface (2) formed by them is interspersed with bristles made of monofilament man-made fibers, or of a monofilament or multifilament yarn. The bristles can be dotted on the surface or arranged in lines or bundles. Their length matches or exceeds the height of the pile fabric formed through the yarns.

USE - The invention provides for more efficient cleaning than a conventional mop as the cleaning liquid is discharged and absorbed simultaneously.

DESCRIPTION OF DRAWINGS - The drawing shows a mop with a linear arrangement of bristles.

2 Suction surface of mop
